

Seafood Expo Asia

Hygiene at every level

SILIKAL is showcasing an innovative solution for fish tanks at Seafood Expo Asia. The company is also bringing its hygienic and durable flooring systems for the fish industry to the exhibition.

With the innovative SILIKAL® FishTank System, the German company SILIKAL offers a solution that has already proven itself in practice for coating vertical and horizontal surfaces, e.g. the interiors of fish tanks. The smooth, fast-curing methyl methacrylate coating is a crack-bridging membrane with a smooth top coat and good abrasion resistance. Its surface is extremely easy to clean. The coating also offers good resistance to UV light and many chemicals. It exhibits excellent ageing and weather resistance.

The SILIKAL® FishTank System can be installed on various substrates. Its short curing time makes it ideal – both for new installations and for extensions and renovations. Full mechanical and chemical resistance is achieved just one hour after the final layer has been applied. The system can be used both indoors and outdoors.

The company's other products also stand out for their outstanding hygiene and durability: SILIKAL flooring systems are easy to clean and feature a hard-wearing surface. They are also resistant to many alkalis, salts, oils and fats. Individually adjustable slip resistance levels ensure the necessary safety on damp or wet floor surfaces. Also important: the systems can be installed quickly. One hour after the final coat is applied, the floors are fully load-bearing.

SILIKAL reactive resin floor coatings are proven to be suitable for food processing. Current approvals and certifications, such as HACCP International and Halal, and the recommendation of the German Federal Association of Food Inspectors (Bundesverband der Lebensmittelkontrolleure Deutschlands e. V.) underscore the properties of Silikal floor coatings. Stand: B12

About Silikal:

The Silikal, founded in 1951 and based in Mainhausen near Frankfurt am Main, has been developing and manufacturing reactive resins for the protection of floorings, buildings and infrastructures based on methyl methacrylate, epoxy and polyurethane for over 60 years. The extensive range includes products for industrial and commercial floorings, for concrete repairs and maintenance, for building and roof waterproofing, road markings, tactile guidance systems and orthopaedic resins, for example. Marketing takes place via the company's own sales team, representatives, specialist installers from the trade, construction and building protection companies as well as intermediaries such as engineers, planners and architects. Silikal now operates in 68 countries worldwide, maintains 8 foreign offices, 18 warehouses worldwide and is represented in Germany and Europe as well as on every continent in the world.
