Headline:	<b>Smart Aquaculture Supports Sustainable Tilapia Farming in Taiwan for the U.S. Market</b>
Sub headline:	Partial adoption of smart aquaculture helps improve traceability, food safety, and long-term supply reliability for U.S. buyers

**Body Copy:**

Guarantee Liability Yun-Lin County Ko-Fwu Fishes Cooperation, a farmer-owned aquaculture cooperative in southern Taiwan, is strengthening its tilapia supply to the U.S. market through **the partial adoption of smart aquaculture systems** across selected farming ponds.

Founded in 1996 in Kouhu Township, Yunlin County, Ko-Fwu Fishes Cooperation has expanded its operations to include processing and now works with more than 200 contracted growers. This contract farming network supports **stable raw material supply** and **consistent product quality** while enhancing supply chain transparency, with farming and processing operations conducted in accordance with **internationally recognized aquaculture certification standards, including ASC and BAP**.

Smart aquaculture technologies have been selectively introduced to improve water quality monitoring, fish health management, and production oversight. This phased approach supports enhanced **traceability, food safety controls**, and **sustainability practices**, while maintaining stable production volumes.

For the U.S. market, Ko-Fwu Fishes Cooperation primarily supplies IQF tilapia fillets, focusing on larger portion sizes such as 9–11 oz and 11 oz and up, which are widely used in foodservice and retail channels.

By combining **smart aquaculture** with a vertically aligned contract farming model, Ko-Fwu Fishes Cooperation supports **long-term supply reliability** and aligns with growing U.S. market expectations for **sustainably farmed** and **safely produced seafood**.
