

PRESS RELEASE

Yu Fish reinforces food safety commitment through DNV recertification

Singapore, 3 September 2026 – Yu Fish Pte Ltd has been recertified by DNV to ISO 22000, the international standard for food safety management systems. The recertification covers the distribution and storage of seafood and processing, continuing a certification relationship with DNV that dates back to 2016.

Based in Singapore, Yu Fish connects seafood suppliers with customers across regional markets through seafood distribution, storage and processing services. With a business model focused on knowledge, innovation, differentiation and flexibility, the company works with partners across the global aquaculture and fisheries sector to serve customers in Singapore and the wider Asian market.

A long-term commitment to food safety

ISO 22000 sets out requirements for a food safety management system, providing organizations across the food chain with a framework to identify, prevent and control food safety hazards. The standard combines established food safety principles, including HACCP, prerequisite programmes, system management and communication, within a structured management system.

For Yu Fish, adopting ISO 22000 was an early step towards establishing a more formal and independently assessed approach to food safety management.

“When we first embarked on ISO 22000 certification, it was not a regulatory requirement. We saw it as an important step in formalising and validating our operations and strengthening the way we manage food safety. Working with DNV was a natural choice because its rigorous auditing processes and uncompromising integrity provide the robust assurance we need to maintain a high-quality food safety management system and build trust with our customers from sea to plate,” said **Woon Kee Yang, Managing Director, Yu Fish**.

Supporting confidence across the seafood value chain

Food safety is particularly important in seafood distribution and handling, where effective controls and consistent processes are essential throughout storage, processing and delivery. ISO 22000 provides Yu Fish with a structured framework for managing these responsibilities and for continually reviewing and improving its food safety management system.

“Yu Fish’s long-standing commitment to ISO 22000 demonstrates the value of embedding food safety into the way an organization operates and improves over time. Independent certification provides customers and other stakeholders with confidence that the management system has been assessed against internationally recognized requirements. We are pleased to continue supporting Yu Fish on its food safety journey,” said **Melissa Payne, Area Manager – Southeast Asia and Oceania at DNV**.

Yu Fish’s approach to food safety sits alongside its wider focus on quality and sustainability as it works with seafood producers and partners around the world. From its base in Singapore, the company continues to adapt to changing market requirements while maintaining a focus on delivering quality seafood consistently and responsibly.
